Reflection on assignment 2

When trying to alter the x for the 7 highest probabilities, the poem somehow was making sense. I then had the idea of switching it up a bit and asked Gemini to try and generate a version with the antonym of said 7th word if possible. I quickly realised how messy it rendered the poem so I promptly stopped with this idea. It was a lot of back and forth I had to do with changing that x value through that for loop but I finally ended up on something interesting once I typed 40. If I were to implement a way to replace all nouns in the poem to the 7th highest probability alternative, I'd first make sure that the script can identify every noun in the poem and then make sure it replaces them with whatever word the p+7 technique would give me. As I'm writing this, I fear that it can become an issue if the script doesn't differentiate nouns, verbs and pronouns. So I think including some way to identify those types of words as well can be beneficial in a problem free solution.
