Reflection on assignment 1

When it comes to my current understanding of generative AI tools, I have to say that I'm not well versed with the medium. For this assignment I had Google Gemini help me format my prompts to reduce the possibilities of it glitching and not giving me the desired result. This assignment made me realise that AI prompters out there don't necessarily have a good grip of what will come out of the generative AI machine. Negative prompts are also a new notion I had to get familiar with; I thought at first all you needed was to feed AI whatever prompt came to mind and you'd get a perfect result the more words you feed it, but it turns out that less can in fact be more. Through trial and error, and the help of Gemini AI assistant, I came to realise that some word combination may be detrimental to the result that I'm trying to achieve. For instance, I was trying to create a family with their heads replaced by animal heads because I was taking inspiration from Hannah-Hoch; I learned that I should avoid using the word 'family' because AI models are highly trained on images that are labeled as 'family' pictures, which strictly features humans with human faces. So in that moment I had to render my prompt even more primitive and tell the AI model to generate "three humanoid figures" instead of "family of three".

As an artist, I don't get inspired by AI art, but there is this musical artist on Spotify that is making use of AI to elevate his skills; he used to work in a symphony band and now he's strictly

using AI to its full advantage and I have to admit that some of his works are quite nice; his name is Nuvoluxe on Spotify. The one unfortunate thing about his work is the sheer number of songs that he's putting out so it's hard to keep up with all his work. If there is an album of his that I could recommend, it's "Mid-Century Bossa Nova Lounge". 😊
